POLYNOMDIVISION

Polynomdivision

$$(x^3 - 6x^2 - x + 6) : (x - 1) =$$

Wir rechnen hier zunächst $x^3 : x$.

$$(x^3 - 6x^2 - x + 6) : (x - 1) = x^2$$

Als nächstes rechnen wir $x^2 \cdot (x - 1) = x^3 - x^2$.

$$(x^3 - 6x^2 - x + 6) : (x - 1) = x^2$$

$$x^3 - x^2$$

Dies schreiben wir unter $x^3 - 6x^2$.

$$(x^3 - 6x^2) - x + 6 : (x - 1) = x^2$$

Dies ziehen wir ab und erhalten $-5x^2$.

$$-(x^3 - x^2)$$

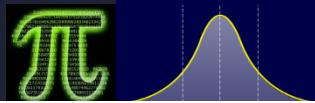

$$-5x^2$$

$$(x^3 - 6x^2) - x + 6 : (x - 1) = x^2$$

Das $-x$ ziehen wir nun runter:

$$-(x^3 - x^2)$$

$$-5x^2 - x$$

Polynomdivision

$$\begin{array}{r} (x^3 - 6x^2 \boxed{-x} + 6) : (x - 1) = x^2 \\ -(x^3 - x^2) \\ \hline -5x^2 \boxed{-x} \end{array}$$

$$\begin{array}{r} (x^3 - 6x^2 - x + 6) : (\boxed{x} - 1) = x^2 \boxed{-5x} \\ -(x^3 - x^2) \\ \hline \boxed{-5x^2} - x \end{array}$$

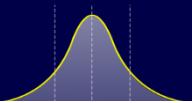

$$\begin{array}{r} (x^3 - 6x^2 - x + 6) : (\boxed{x - 1}) = x^2 \boxed{-5x} \\ -(x^3 - x^2) \\ \hline -5x^2 - x \\ \boxed{-5x^2 + 5x} \end{array}$$

Jetzt geht alles wieder von vorne los.

Also Division: $-5x^2 : x = -5x$

$$(-5x) \cdot (x-1) = -5x^2 + 5x$$

Es erfolgt wieder eine Subtraktion:

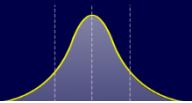

Polynomdivision

$$\begin{array}{r} (x^3 - 6x^2 - x + 6) : (x - 1) = x^2 - 5x \\ -(x^3 - x^2) \\ \hline -5x^2 - x \\ -(-5x^2 + 5x) \\ \hline -6x \end{array}$$

Wir ziehen + 6 runter

$$\begin{array}{r} (x^3 - 6x^2 - x + 6) : (x - 1) = x^2 - 5x \\ -(x^3 - x^2) \\ \hline -5x^2 - x \\ -(-5x^2 + 5x) \\ \hline -6x + 6 \end{array}$$

wieder eine Division: (-6x) : x = -6

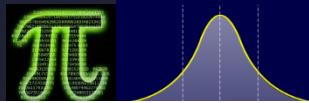

Polynomdivision

$$\begin{array}{r} (x^3 - 6x^2 - x + 6) : (\boxed{x} - 1) = x^2 - 5x \boxed{-6} \\ -(x^3 - x^2) \\ \hline -5x^2 - x \\ -(-5x^2 + 5x) \\ \hline \boxed{-6x} + 6 \end{array}$$

$$\begin{array}{r} (x^3 - 6x^2 - x + 6) : (\boxed{x - 1}) = x^2 - 5x \boxed{-6} \\ -(x^3 - x^2) \\ \hline -5x^2 - x \\ -(-5x^2 + 5x) \\ \hline \boxed{-6x + 6} \\ \boxed{-6x + 6} \end{array}$$

eine letzte Multiplikation: $(-6) \cdot (x-1) = -6x + 6$

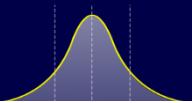

Polynomdivision

$$\begin{array}{r} (x^3 - 6x^2 - x + 6) : (x - 1) = x^2 - 5x - 6 \\ -(x^3 - x^2) \\ \hline -5x^2 - x \\ -(-5x^2 + 5x) \\ \hline -\left(\frac{-6x + 6}{-6x + 6}\right) \end{array}$$

fertig!

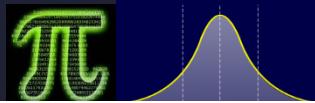

Probe:

$$\begin{aligned} & (x^2 - 5x - 6) \cdot (x - 1) = \\ & x^3 - x^2 - 5x^2 + 5x - 6x + 6 = \\ & x^3 - 6x^2 - x + 6 \end{aligned}$$

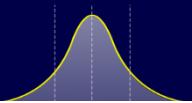

Polynomdivision Übung 1

$$\begin{array}{r} (x^3 - 2x^2 - 5x + 6) : (x - 1) = x^2 - x - 6 \\ \underline{- (x^3 - x^2)} \\ \quad - x^2 - 5x \\ \underline{- (-x^2 + x)} \\ \quad \quad - 6x + 6 \\ \underline{- (-6x + 6)} \\ \quad \quad \quad 0 \end{array}$$

Polynomdivision Übung 2

$$\begin{array}{r} (3x^3 - 10x^2 + 7x - 12) : (x - 3) = 3x^2 - x + 4 \\ -(3x^3 - 9x^2) \\ \hline -x^2 + 7x \\ -(-x^2 + 3x) \\ \hline 4x - 12 \\ -(4x - 12) \\ \hline 0 \end{array}$$

Polynomdivision Übung 3

$$(x^5 - 1) : (x - 1) = x^4 + x^3 + x^2 + x$$

$$\begin{array}{r} -(x^5 - x^4) \\ \hline x^4 - 1 \end{array}$$

$$\begin{array}{r} -(x^4 - x^3) \\ \hline \end{array}$$

$$x^3 - 1$$

$$\begin{array}{r} -(x^3 - x^2) \\ \hline \end{array}$$

$$x^2 - 1$$

$$\begin{array}{r} -(x^2 - x) \\ \hline \end{array}$$

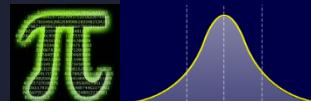

$$x - 1$$

$$\begin{array}{r} -(x - 1) \\ \hline 0 \end{array}$$

Aufpassen:

$$x^5 - 1 = x^5 + 0 \cdot x^4 + 0 \cdot x^3 + 0 \cdot x^2 + 0 \cdot x^1 - 1$$

also: $0 \cdot x^4 - (-x^4) = x^4$!

Polynomdivision mit Rest

$$\begin{array}{rcl} (x^5 + 3x^4 - 7x^3 + 4x^2 + 3x + 1) : (x^2 + 2x - 3) & = & x^3 + x^2 - 6x + 19 \\ \hline -(x^5 + 2x^4 - 3x^3) & & \\ \hline x^4 - 4x^3 + 4x^2 + 3x + 1 & & \\ \hline -(x^4 + 2x^3 - 3x^2) & & \\ \hline -6x^3 + 7x^2 + 3x + 1 & & \\ \hline -(-6x^3 - 12x^2 + 18x) & & \\ \hline 19x^2 - 15x + 1 & & \\ \hline -(19x^2 + 38x - 57) & & \\ \hline -53x + 58 & & \end{array}$$

$$(x^5 + 3x^4 - 7x^3 + 4x^2 + 3x + 1) : (x^2 + 2x - 3) = x^3 + x^2 - 6x + 19 + \frac{-53x + 58}{x^2 + 2x - 3}$$
